

British Divers Marine Life Rescue Risk Assessment

Risk Assessment Title: Rescue/assessment of seals

Risk Assessment Number: BDMLR/Sea

Date: 12/5/23

Date of Review 1/5/24

Risk Assessment Author: C McFadyen

How this Risk Assessment works;

Risk is a combination of the potential accident *SEVERITY* which may be in terms of injury, reputation or economic damage (i.e. resulting in death, serious or minor injury etc) and the *LIKELIHOOD* of that accident occurring (i.e. very unlikely up to almost certain). The risks are calculated using the 5 gate risk matrix below where hazards are identified and an initial risk is calculated. Control Measures are then put in place to eliminate, reduce or mitigate the initial risk and this is then recalculated as the residual risk. This residual risk should be considered as **ALARP (As Low As Reasonably Practical)**.

This Risk Assessment should be considered as a generic assessment and has tried to take into account as many hazards as can be considered foreseeable within our threshold of operations. Safety is the responsibility of each individual attending an incident and a site specific Risk Assessment should be carried out for each task required to be undertaken.

ALL PERSONNEL MUST FOLLOW CURRENT COVID 19 GUIDELINES FOR THE REGION THEY ARE OPERATING IN.

Numerical Value	Likelihood	Severity
1	Very Unlikely	Negligible -Minor Injury with no time off work
2	Unlikely	Minor - Injury and/or up to 3 days off work
3	Likely	Moderate - Injury resulting in over 3 days off work
4	Very Likely	Major - Major injury resulting in incapacitation or long term absence
5	Certain	Catastrophic - Death

Likelihood	1	2	3	4	5
5	5	10	15	20	26
4	4	8	12	16	20
3	3	6	9	12	15
2	2	4	6	8	10
1	1	2	3	4	5
	1	2	3	4	5
					Severity

Task	Hazard	Who is at Risk and How	L	S	IR	Mitigation	L	S	RR
Travel to & from Incident	Vehicle accident due to: <ul style="list-style-type: none"> ➤ Other vehicles ➤ Weather Conditions ➤ Road Conditions ➤ Over speeding ➤ pedestrians 	Attending volunteers and other road users. Injury or death through road traffic accident	2	5	10	Drive Defensively Drive within limits of weather and road conditions Do not exceed speed limit Be aware of pedestrians and other road users.	2	3	6
			3	5	15		2	2	4
			3	4	12		3	3	6
			4	5	20		1	4	4
			2	5	10		1	5	5
	Breakdown	Attending volunteers. Injury through accident cause by breakdown, Exposure caused by stranding in poor weather conditions.	3	1	3	Ensure vehicle is properly maintained. Contact Coordinators or road rescue bodies to assist with safe recovery.	1	1	1
	Getting lost	Attending Medics. Injury or exposure due to vehicle getting stuck or in unsuitable locations	4	2	8	Plan route or use satnav.	2	2	4

Task	Hazard	Who is at Risk and How	L	S	IR	Mitigation	L	S	RR
Access/egress to location	Falling from height due to: <ul style="list-style-type: none"> ➤ Access via steep paths ➤ Access via vertical descent ➤ Access via steep slope ➤ Access over large rocks 	Attending Medics, other agencies and local volunteers, Risk of injury and death, especially head and spinal injury or fractures	3	4	12	If specialist access required (i.e. abseil) only trained personnel should attempt in accordance with training. Ensure helmets and other PPE are used. Utilise Coastguard or cliff rescue assistance. Maintain 3 points of contact on unassisted climbs and slopes.	2	3	6
			4	5	20		1	5	5
			4	4	16		2	3	6
			4	3	12		2	3	6
	Slips/trips due to: <ul style="list-style-type: none"> ➤ Wet grass ➤ Wet rocks ➤ Soft mud ➤ Loose Sand 	Attending Medics, local volunteers, other agencies and public. Injury, including fractures, contusions and head injuries through falls and collision with	4	4	16	Ensure suitable, supporting footwear is worn; check area for most suitable route and remove/avoid trip hazards; ensure helmets are worn if rocks	2	2	4
			4	5	20		2	3	6
			3	3	9		2	2	4
			3	3	9		2	2	4
			4	4	16		2	3	6

	➤ Loose Shingles	other objects.				are a danger; ensure suitable visibility.			
	Stuck in substrate: ➤ Soft Sand ➤ Soft Mud	Attending Medics, Other agencies and local volunteers, public bystanders. Soft tissue injury in pulling free, exposure and risk of drowning if quicksand or stuck in a tidal area.	3 4	4 5	12 20	Use specialist support from Fire and Rescue or Coastguard in affected areas; consider specialised vehicles and buddy system to ensure no one is unaccounted for; temporary walkway/boards for traversing dangerous substrates. Consider placing a suitable cordon to limit access to dangerous areas for public.	1 1	3 4	3 4
	Manual handling injuries	Attending Medics, local volunteers Soft tissue injury, back injuries and falls from overloading	3	3	9	Use correct manual handling techniques. Ensure sufficient team members for lifting; plan route back from lift position to transport.	2	2	4

Task	Hazard	Who is at Risk and How	L	S	IR	Mitigation	L	S	RR
Assessment/ First Aid of the seal pup	➤ Physical Animal Bite,	Attending Medics, other agencies and local volunteers, lacerations, and crush injury from bite	3	2	6	Use PPE and capture methods as taught in training materials; seek help from experienced team members; assess if seal is of a size safe to be handled by one or more volunteers; encourage animal to move to a safer area to handle safely.	2	2	4
	➤ Seal Finger	Attending Medics, local volunteers, other agencies and	3	4	12	Clean wound with clean water	2	3	6

		public. Bacterial infection which is non-responsive to standard antibiotic treatments.				and antibacterial wash; use clean dressing to apply pressure and elevate wound to stop bleeding; ensure patient attends minor injury unit/A&E at earliest opportunity for further wound care and prescription of medication as directed by BDMLR seal bite letter (available on website and in MMM Handbook).			
	➤ Avian Flu and other zoonotic infections	Attending Medics, Other agencies and local volunteers, public bystanders. Zoonotic infections from inhalation of breath or through contact with bodily fluids.	2	5	10	FPP3 face mask to be worn at all times around live animals, eye protection for personnel working near the nostrils. Disposable gloves and barrier suit (waterproof trousers/waders may be sufficient) to be worn at all times and all non disposable gear to be disinfected after incident. Eating and drinking prohibited around the animals and a safe welfare area to be demarcated at a suitable distance with cleaning facilities (i.e. hand sanitizer). All personnel to be briefed on the risks of zoonotic infection and when to seek further medical attention as well as BDMLR infection letter. Masks and barrier equipment to remain in place while in cars if relaying animals and cars to be well ventilated unless heath	1	5	5

						reasons contraindicate (i.e. seal suffering hypothermia).
